## EXPERIENCE

### Software Engineer

Jan 2021 - Present

*Wunderkind*

- Onboarded over 150 clients by implementing user event tracking on each client's website in order to obtain user activity data for the purpose of enhancing each client's behavioral marketing strategies
- Created and expanded upon the product's email capture functions that facilitate API calls between the product and the client's email service provider (i.e. Klaviyo, Salesforce, etc)
- Performed code reviews and provided constructive feedback to fellow team members for the purpose of instilling a safe, efficient, and readable code style
- Spearheaded the documentation project for each client's unique email service provider in an effort to provide a reliable source of information to complete tasks more effectively
- Participated in projects that involved the refactoring and archiving of unused legacy code in order to improve the execution efficiency of the product

### Payroll Specialist

Apr 2018 - Mar 2020

*Geneva Worldwide*

- Managed the payroll team by publishing procedural documentation, training new members, and communicating status updates to the accounting manager during weekly meetings
- Calculated and distributed weekly payments to at least 150+ contractors, estimating an average weekly accounts payable of at least \$100,000
- Generated and sent invoices to 60+ clients, recording an average monthly accounts receivable of at least \$50,000

## TECHNICAL SKILLS

**Languages:** HTML5/CSS3, JavaScript, Ruby, SQL, PHP, Go

**Frameworks/Libraries:** React/Redux, jQuery, Node.js, Ruby on Rails, Express

**Databases:** PostgreSQL, MongoDB, AWS

**Other:** Docker, Git

## PROJECTS

**VaporWave** | *React/Redux, Ruby on Rails, JavaScript, HTML5/CSS3, PostgreSQL, AWS S3*

*A full stack clone of SoundCloud allowing users to upload and play songs*

- Implemented feature to upload media files by connecting Ruby on Rails ActiveRecord to AWS S3 hosting
- Created a music player using Redux global state to play songs and display the current song's metadata

**Trivia Night** | *React Hooks, JavaScript, HTML5/CSS3*

*A web application game of trivia*

- Designed a simple front end trivia application that pulls questions and answers from a JSON file
- Employed React state to randomly select questions and keep track of the user's current score

**Heat Check** | *JavaScript, HTML5/CSS3, D3.js*

*A data visualization web application used to compare the top NBA players' stats up to the 2020 season*

- Developed feature to compare 2 players' career and seasonal average stats using JavaScript event listeners
- Utilized D3 package to parse through a player's stat CSV file and display them on a line graph and player card

## EDUCATION

**App Academy** - *Full Stack Software Engineering Track*

Jul 2020

**Binghamton University** - *Bachelor of Science in Accounting*

May 2017
