Adrian Kim

Software Engineer

taehyun.kim11595@gmail.com | linkedin.com/in/adriantaehyunkim | New York, NY

SKILLS

Languages:	Python, TypeScript, JavaScript, SQL
Frameworks:	Django, React
Libraries:	Redux, React Query, Mantine (UI component library)
Data and infrastructure:	PostgreSQL, AWS (SQS, S3, EKS), Celery, Docker, Kubernetes, Git
Observability:	Datadog, Sentry, OpsGenie

EXPERIENCE

Quorum

Software Engineer II Apr 2024 – Present
Software Engineer I Jan 2023 – Apr 2024

- **Owned core product areas**, including email delivery for 1M+ recipient campaigns, bulk data imports of 10M+ rows daily, SSO and account settings, used by nearly 2,000 clients including Fortune 100 companies.
- **Led 11 projects as tech lead** from spec to launch, including a company-wide React upgrade and a self-serve AI settings page, partnering with product and design to define requirements before implementation.
- **Directed response to the company's most severe incidents**, restoring access after a company-wide SSO lockout, recovering 800K+ stuck emails and presenting postmortems to senior leadership.
- **Hardened critical product areas** by investigating root causes and implementing permanent fixes, safeguards, test coverage and monitoring, reducing bug frequency by up to 90%.
- **Established architecture documentation for owned product areas**, authoring decision records and design guides for email delivery, single sign-on and user data that engineers and AI coding agents rely on.
- **Retired technical debt** across high-traffic code paths by consolidating duplicated logic into shared abstractions that new features build on.
- **Strengthened the team's on-call practice** by resolving recurring alerts at their root cause and authoring runbooks that enabled faster resolution of client issues.
- **Mentored and onboarded 5+ engineers** through deep-dive sessions on core systems, 1:1s to set success metrics, and hands-on support that kept them unblocked.

Wunderkind

Software Engineer Jan 2021 – Jan 2023

- **Onboarded 100+ clients a year**, up to 10 a month, by building behavioral event tracking and API integrations with each client's email platform.
- **Consulted directly with clients** each week to scope integration requirements and resolve blockers ahead of launch.

EDUCATION

Binghamton University, Bachelor of Science
